

LIBERTY APPROVED TO SELL POWER IN MARYLAND
Fast Growing Company Now Licensed To Sell Electricity in 3 States

Ft. Lauderdale, FL—May 24, 2004—Liberty Power Corporation, the fastest growing independent power provider in the U.S., announced today that the Company had been approved to sell electricity in Maryland.

Presently, Liberty is the power provider of choice for national companies that include **New York Life, Lowe's, Circuit City, and Linens N Things**, as well as government entities and thousands of small and mid-sized businesses.

Maryland deregulated its power markets in 2000, and now more than thirty percent of companies there have transferred to electricity suppliers like Liberty Power. On July 1, 2004, electricity prices statewide will no longer be buffered from price volatility by the Standard Service Offer charged by their utilities. Companies affected will include all customers in the PEPCO utility region, as well as municipalities, telecommunications network providers, and customers with high monthly demand in BGE's market.

“We plan to aggressively market our brand of competitively-priced electric power to Maryland's businesses and public entities,” said David Hernandez, Liberty Power CEO. “Liberty Power will be able to buffer customers from price fluctuations while also lowering their overall electricity costs with our comprehensive product offering.”

“We've evolved from being a small company with strong products to selling power to thousands of businesses nationally, and we serve the needs of critical government agencies like the Departments of Defense and Homeland Security,” he said. “Companies throughout the U.S. are embracing Liberty's low cost, high service model and we look forward to powering up our Maryland operations.”

Liberty Power is a national, minority-owned energy service company. The company supplies electricity to thousands of small, mid-sized, and large businesses as well as government entities. Liberty Power is approved to provide retail electricity to end users in Texas, New York, Maryland, and New Jersey and is certified by the Federal Energy Regulatory Commission to market wholesale power throughout the United States.
